Hair Treatment Aftercare

Do's & Don'ts after hair treatments

Hair Restoration | Hair Fall Management | Scalp Care

VERSION 1.0 · PATIENT EDITION

For patients after hair restoration & hair fall treatments

RENEW GROUP OF COMPANIES

Do's after your hair treatment

Simple habits that support recovery and help you follow your treatment plan.

Gentle care
Treat the scalp softly

On schedule
Medicines & follow-ups on time

Hydrate
Water & balanced diet

Stay in touch
Tell us if anything feels wrong

Please do

- Follow your doctor's instructions exactly as advised.
- Stay hydrated and maintain a balanced diet.
- Take prescribed medicines and use recommended products as directed.
- Attend scheduled follow-up appointments.
- Keep the treated area clean according to clinic instructions.
- Protect the scalp from excessive sun exposure when advised.
- Follow the recommended hair-washing schedule and technique.
- Tell the clinic about unusual pain, swelling, bleeding, irritation or unexpected reactions.

☆ **Hair-transplant patients:** follow the clinical team's specific sleeping, washing and activity instructions — they are made for your procedure.

Don'ts after your hair treatment

Avoid actions that may irritate the treated area or interfere with your recovery plan.

- Do not scratch, rub or pick the treated scalp.
- Do not smoke or drink alcohol when your clinician has advised avoiding them.
- Do not apply unapproved oils, serums, hair dyes or home remedies.
- Do not stop prescribed medication without consulting your doctor.
- Avoid excessive heat or direct heat exposure when advised.
- Do not compare your recovery with another patient's results.
- Do not do strenuous physical activity until your clinical team says it is appropriate.
- Do not expect immediate final results; visible changes take time.
- Do not wear tight headwear unless specifically advised.

Why patience matters

Results take time

- Hair grows in cycles
- Visible change is gradual

Every scalp is different

- Recovery varies person to person
- Avoid comparing with others

Follow-ups track progress

- Reviews and photos at set intervals
- Plan adjusted by your doctor

When to contact the clinic

Please contact your clinic promptly if symptoms are unusual, significant or getting worse.

- ⚠ Significant or worsening pain
- ⚠ Persistent bleeding or marked swelling
- ⚠ Signs of infection or severe irritation
- ⚠ Any other unexpected reaction

⚠ **Urgent:** if symptoms are severe or you feel acutely unwell, seek urgent medical care.

⚠ **Important:** aftercare varies by treatment. Your treating doctor's instructions take priority over this general guide.
